**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-3 and 5-21 are rejected under 35 U.S.C. 103(a) as obvious over Nanba et al. 6,117,542, in view of Bodiger 5,849,827, Takagi 6,355,767, Kobayashi 6,403,683, Janarthanan et al. 6,503,628, Toyoshima et al. 6,596,812 or Campbell et al. 6,613,824.
3. All references have been described already. The rejections are maintained in view of the Response to Arguments below.

***Response to Arguments***

4. Applicant's arguments filed 5/15/06 have been fully considered but they are not persuasive. While the examiner accepts the conclusion of the Declaration by Dr. Seidel that an ABS resin having a 7% butadiene content deleteriously effects the inventive composition and accepts the conclusions of the specification that and ABS resin having a 15% butadiene content does likewise, the 8-10% range is still in question. In Nanba et al. rubber reinforced resin A-3 (see from column 29, line39, through column 30, line 34) is and ABS resin having a molecular weight of 120,00 and having a composition of 24% acrylonitrile, 10% butadiene and 66% styrene is disclosed. This resin is used with polycarbonate, flouoresin and phosphate flame-retardant in Examples 4 and 12-15 in Tables 1 and 3, and Comparative Examples 4 and 13-14 in Tables 2 and 4. It is true that the molecular weight of the exemplified polycarbonate is only 22,500 (column 29,

Art Unit: 1714

lines 20-22), but the specification in column 16, lines 42-55, teaches a most preferred molecular weight of 10,000-80,000. Unless applicants can show a significant difference in performance between a compound using an ABS resin containing 10% butadiene and one containing 11% butadiene, this rejection is, and will be maintained.
